

**Abstract**

A method of selecting a symbol table includes  
providing a plurality of symbol tables in a computer  
5 system having an address pointer. Each of the symbol  
tables encompasses a range of addresses. The method also  
includes identifying at least one of the plurality of  
symbol tables within whose range of addresses the address  
pointer is pointing, and selecting the at least one of  
10 the plurality of symbol tables.
